

COLOR REDUCES RISKS OF MEDICATION ERRORS

PYLOR TECHNOLOGIES INTRODUCES
Color Label Solutions
for Patient Safety!

Does your compounding pharmacy label and repackage pharmaceuticals? The Toshiba TEC On-Demand Color Printer is for you! Color thermal transfer printers provide the best option and best solution to reduce medication-labeling errors!

WHY THERMAL TRANSFER PRINTERS?

- * Excellent Print Quality
- * Excellent Scanner Readability
- * Excellent Durability and low long-term maintenance
- * Sharpest line possible due to less microscopic blurring
- * Resists smudges caused by alcohol and other liquid cleaners used in clean rooms to meet USP 797

WHY COLOR?

- * Color contrast is an important aspect of readability
- * Color has Power
- * Color helps differentiate between specific information packets
- * Color enables more accurate transfer of information

A label with a **black drug name**, **blue strength** and **red cautions** as information packets or boxes on a white label helps the brain differentiate between this important information.

Kenneth Latta, BS, RPh, manager of a major university hospital Pharmacy Production and Packaging center, introduced the Toshiba TEC CB-416 more than 4 years ago:

*"The **TEC 416 is a workhorse of a printer.** The only significant downtime we experienced was when someone removed a screw and lost it!*

*"The versatility of the print program and the ultimate readability of the labels has veritably eliminated 'unreadable labels' as a cause of error in our health system. **The TEC ON-Demand Color Printer has paid for itself many times over in error prevention.***

*" **The color information packets add safety beyond barcodes.** As time pressures the frontline staffs in our hospitals and natural disasters such as hurricanes knockout our technical capabilities, it becomes imperative to provide both machine and human readable labels that are optimized for complete and correct information transfer."*

Want more information on the Toshiba TEC ON-Demand Color Printer for your pharmaceutical labeling? Need input on best label stock to optimize your label printing and to reduce readability errors?
